## Area of irregular shapes

Estimate the area of each shape.
Then find the area by counting the squares.
Take care with squares that are not completely full. If a square is more than half full, count it as a full square.

|  | Estimate | Number of squares <br> $\left(\mathrm{cm}^{2}\right)$ |
| :--- | :---: | :---: |
| Star |  |  |
| Heart |  |  |
| Face |  |  |
| Scroll |  |  |

I can estimate the area of a shape by counting squares
